

## Reduce Your Maintenance Costs

Hydro International Asset Management Contracts Eliminate Uncertainty

### Wastewater Application - Service Offering

#### The Hydro Service Mission

Asset management is an important part of any capital improvement plan. Plant upgrades offer new challenges for operations. New processes, new operation sequences, new maintenance requirements and often new personnel.

Repairs and associated downtime cost money. An asset management contract with Hydro International will keep your Advanced Grit Management system operating at its best, maximizing protection of downstream equipment. Choose one or two site visits per year with full maintenance performed on each visit. Asset management contracts include a parts allowance, rapid response should issues arise, discounted rates on additional site visits and a direct line to your regionally based Hydro International Service Manager / Technician and sales representative.

A Hydro International Service Contract takes the uncertainty out of your new system.

**Call Hydro today at 866.615.8130 for Service Contract options and pricing!**
